Experience

BARRACUDA (FORMERLY EVO SECURITY)

Full Stack Software Engineer I

Associate Software Engineer

REMOTE (DALLAS, TX)

Sept 2025 - Present

July 2024 - Sept 2025

- Owned and executed the end-to-end product delivery of an overhauled customer onboarding flow using Ruby on Rails and Vue.js, directly lowering friction and accelerating initial user activation metrics
- Overhauled and modernized our notification delivery system, allowing for custom notification routing for customers while ensuring seamless delivery across our Vue portal, Flutter mobile app, emails, and SMS messages all from our Rails backend
- Secured multi-tenant cloud operations in alignment with strict SOC-2 compliance frameworks and built robust unit and integration tests to ensure continuous data quality
- Designed and built custom internal packages for automated metadata processing and LLM-powered file analysis reports, boosting platform data-handling and visibility
- Maintained existing legacy React infrastructure while leading the complete UX modernization of the primary client portal using Nuxt and TypeScript, acting heavily on direct user feedback
- Integrated AI-assisted programming tools into daily development workflows to accelerate feature implementation, optimize complex logic, and write comprehensive test suites

ECOLAB

Software Engineer Co-op

DALLAS, TX

Jan 2023 – May 2023

- Collaborated with a 25-person international team to enhance functionality and resolve system bugs for the Prep N Print application, improving user satisfaction by 20%
- Demonstrated expertise in UI redesign using C# and Xamarin, ensuring compliance with requirements and elevating the user experience
- Pioneered the design of the user interface for a new company application using Figma, actively engaging stakeholders to gather inputs and incorporate 90% of their feedback through biweekly meetings

ALPINE SOFTWARE

Software Developer Co-op

MENDON, NY

May 2022 – Dec 2022

- Spearheaded the programming, maintenance, and support of existing applications using Delphi and SQL, ensuring seamless operations
- Mentored a team of 4 interns, resulting in a 25% increase in their productivity and the successful completion of 15 additional projects weekly
- Collaborated closely with clients, expertly translating project requirements into comprehensive design specifications that aligned with client expectations, ensuring successful project delivery

Projects

CLEPA - AI HOME CARE ASSISTANT

Aug 2025 – Present

- Engineered a zero-to-one, asynchronous LLM-powered platform utilizing a Python (FastAPI) web service, Firebase Firestore/Auth, and Google Gemini, hosted using Google Cloud Platform (GCP)
- Purpose-built for healthcare technology, translating complex telehealth visit transcripts and clinical documentation into everyday, actionable daily care plans for patients and caregivers
- Architected the system with rigorous data security measures, incorporating data-handling best practices aligned with HIPAA compliance to safeguard sensitive patient records
- Built and optimized a fully automatic deployment pipeline utilizing GitHub Actions and cloud services, managing staging and production environments reflective of scalable AWS architecture paradigms
- Developed an authenticated frontend using Nuxt and token-handling frameworks, tracking user onboarding and retention bottlenecks via product analytics ahead of a beta waitlist launch

Education

ROCHESTER INSTITUTE OF TECHNOLOGY

B.S Software Engineering, Minor Computer Engineering

Rochester, NY

Grad Date: May 2024

Skills

Technical: React, Python, Java, Ruby on Rails, JavaScript, Postgres, MySQL, SQL, FastAPI, Vue.js, Nuxt, HTML, CSS

Tools/Cloud: Cursor, Codex, Windsurf, Agentic AI Development, GCP, AWS, Firebase, Jira, Git

Soft Skills: Leadership, Effective Communication, Team Collaboration, Client Relations, Agile Methodologies
